SOFTWARE DEVELOPER

Passionate and detail-oriented aspiring software developer with a strong analytical mindset and a creative approach to problem-solving. Experienced in designing user-friendly interfaces, developing dynamic web applications, and leveraging data-driven insights to enhance functionality. Exceptional in applying logical thinking and software development principles to build efficient, scalable solutions. Seeking internship to contribute technical expertise and continue growing in the ever-evolving world of technology.

TECHNICAL SKILLS

Certificate: Certified XR Developer – Unity, C# Scripting in Unity

Systems: Windows, iOS, Android

Languages: SQL, C#, Python, HTML5, CSS

Hardware: PCs, Mac products

Software: Microsoft (MS) Office Suite, GitHub, Visual Studio Code, AWS, Unity Game Engine

Databases: Oracle, MySQL

Business/Professional: Troubleshooting, Project Management, Verbal and Written Communication, Adaptability, Creative thinking

RELEVANT SKILLS

• Systems and Software Design	• Interaction Design (IxD)	• Version Control
• Front-End Development	• Database Management	• Back-End Development
• Performance Optimization	• Collaboration	• Time Management
• Self-Motivated	• Debugging & Testing	• Algorithms & Data Structures

College Involvement: Ivy Girls Who Code March 2004 - Present

Contributed to discussions on inclusivity in tech, personal growth, and leadership within STEM fields. Collaborated with fellow students to create events supporting the club's mission to close the gender gap in technology.

EDUCATION

Technical Certificate, Software Development

Expected Graduation May 2025

Ivy Tech Community College, Indianapolis, IN

GPA: 4.0

Relevant coursework:

Computing Logic, Website Development, Informatics Fundamentals, Software Development, Experience/User Interface (UX/UI) and Data Analytics.

Relevant Class & Personal IT Projects:

- **SnapCube XR – April 2025**

Built a simple MR game called *SnapCube XR* to explore mixed reality using the Meta Quest 3. My goal was to build a simple MR game where users could interact with a virtual cube using either hand tracking or controllers. I developed the prototype in Unity using C#, implemented an interactive UI, managed input logic, and followed a modular design approach. I also used Git for version control and focused on smooth integration between the front-end and back-end. The result was a fully functional prototype that highlights immersive interaction and demonstrates full-stack skills such as UI/UX design, state management, and clean code architecture in an MR environment.

- **PayMaster – March 2025**

Led a team project in a computing logic course to develop a payroll management system using pseudocode and flowcharting. When the original leader became inactive, I took initiative to guide the team, organize meetings, review modules, and ensure integration across components. Utilized shared documents for coordination, validated inputs, calculated payroll and taxes accurately, and ensured all 10 test cases passed. Successfully delivered the project on time, strengthening my leadership, problem-solving, and collaboration skills under pressure.

EXPERIENCE

Team Lead

January 2022-June 2023

Sandbox VR, Indianapolis, IN

- Led and trained team members to deliver high-quality guest experiences, demonstrating strong communication, problem-solving, and attention to detail, valuable skills in technical environments.
- Partnered with management to execute marketing initiatives and optimize labor strategy, contributing to overall store profitability, mirroring data-driven decision making and performance optimization.
- Mentored new hires, reinforcing strong documentation habits and knowledge sharing, similar to maintaining clarity and consistency in technical workflows.

Experience Guide

September 2022-December 2023

Sandbox VR, Indianapolis, IN

- Executed Unity-based XR holodeck functionalities and troubleshoot equipment issues.
- Collaborated with management and support teams to outline technical solutions.
- Performed technical tasks on servers with Sandbox OS for optimal functionality.
- Developed and implemented best practices to enhance XR functionalities within the OS system and servers.
